

Guidelines

for Mass Influenza Vaccination Campaigns

During a Vaccine Delay or Shortage

Vaccinating Persons at High Risk

General Strategies

- ✓ Develop liaisons with community groups representing the elderly and those with chronic diseases (e.g., offer incentives for groups to attend clinics, ask for volunteers to help promote and run clinics).
- ✓ Share information about your campaign with other clinics/facilities providing flu vaccine in your community. As needed, inform clients about other locations where vaccine is available.
- ✓ Schedule and publicize special “senior clinics” when only elderly or other high-risk patients will be accepted.
- ✓ Schedule flu vaccine delivery during daytime hours when the elderly, and other high-risk patients, have less need to compete with younger, healthy clients for a place in line at the vaccination location.
- ✓ Offer vaccination to elderly and chronically ill employees and relatives of employees in workplace campaigns.
- ✓ Promote the flu vaccination campaign by publishing “public service” announcements in local media stressing a commitment to first serve the high-risk population and asking healthy people to cooperate by waiting for availability of vaccine. Include up-to-date information about expected availability of more vaccine and about flu activity (or lack thereof) in the community.
- ✓ Share vaccine with other providers (e.g., hospitals, nursing homes, physicians) who see high-risk patients.

At the Vaccination Location . . .

- ✓ Establish criteria for identifying high-risk individuals and health-care workers, and give these individuals top priority when vaccine is first available.
- ✓ Provide a brief questionnaire or checklist to enable prospective vaccinees to determine their risk status, and encourage those not at high risk to return in November or later.
- ✓ Post notices (or personnel) asking healthy people to defer their flu shots so high-risk people can be protected with available vaccine. Give people the opportunity to defer *before* they have started to wait in line.
- ✓ Establish “express lanes” for elderly and high-risk patients to reduce the amount of time they have to stand in line to receive the vaccine.
- ✓ Keep customers informed. Post notices informing clients of hours of flu vaccine clinics and of the need to vaccinate high-risk patients first. Establish hotlines or websites containing relevant information. Assure customers (if appropriate) that additional shipments of vaccine are expected. Post information about other locations where vaccine is available.
